# *Numeracy*

*L.O.  To be able to use negative numbers which occur in everyday life (money).*

If you had £100 in the bank and you spent £105, you would be £5 *OVERDRAWN* (and the bank manager would want a word).

**Now work out by how much you would be overdrawn if you had the amount of money in the left column, and you spent the amount of money in the middle column.**

*OVERDRAWN BY:-*

| *MONEY YOU HAVE* | *MONEY YOU SPEND* | |
|---|---|---|
| £40 | £45 | |
| £50 | £58 | |
| £56 | £67 | |
| £65 | £87 | |
| £35 | £45 | |
| £23 | £66 | |
| £70 | £98 | |
| £60 | £78 | |
| £47 | £67 | |
| £87 | £90 | |
| £55 | £77 | |
| £12 | £60 | |
| £70 | £105 | |
| £67 | £110 | |
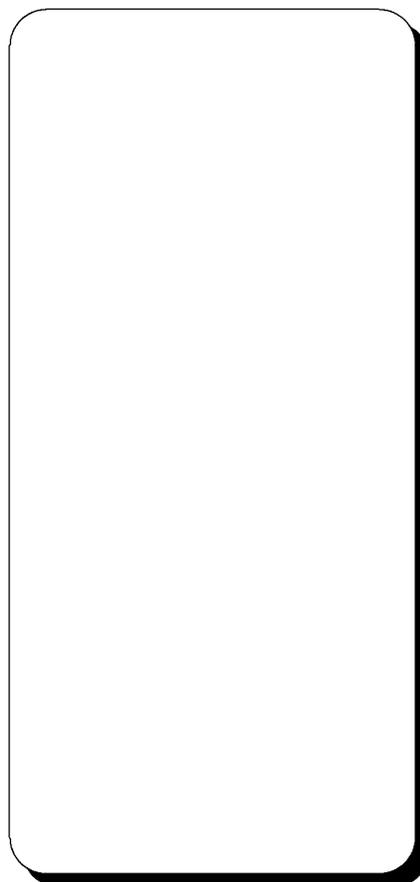

Now that you've worked out all those amounts, can you explain in this frame how you actually managed to work them out? And have you realised that all the numbers in the far right column are actually NEGATIVE numbers!!!
