

Blank flip flap

Flip Flap templates

Copy onto card. Cut out the squares, and cover them [both sides] with sticky back plastic, keeping the same layout as on the template, but leaving a small space between each square. They are now easily folded backwards, to use in quick fire mental maths activities. Great for number bonds and tables activities. They can be folded back in various ways to show every combination for number bonds to 10.

Examples of questions to use:

How many ----- can you see? How many can I see?

You can see 8. How many can I see?

I can see 3 lots of 2. How many lots can you see? How many is that altogether?
