

How do seeds get spread around?

The Wind

Seeds can be spread around in many different ways. Some plants and trees need wind to spread their seeds about.

Sycamore Seeds

Some people call the sycamore seeds a " _____ " because of the way they spin around when they fall. The wind carries them far away from the _____ where they can start growing.

Dandelion Seeds

The dandelion seeds look like tiny _____. Some of these tiny parachutes are carried by the wind. Some people pick them up and _____ on them.

parachute

blow

tree

helicopter
