

Name \_\_\_\_\_ Date \_\_\_\_\_

LO: to draw and translate shapes on a co-ordinate plane

On the grid below, draw your own shape (don't make it too complicated shapes with straight lines in them work best) and translate it. Write down the co-ordinates of your original shape. Write down how you are planning to move it (e.g. 2 up and 2 to the right) and then draw it again and write down the new co-ordinates.

The co-ordinates of the original shape are:

---

---

---

I moved it:

---

---

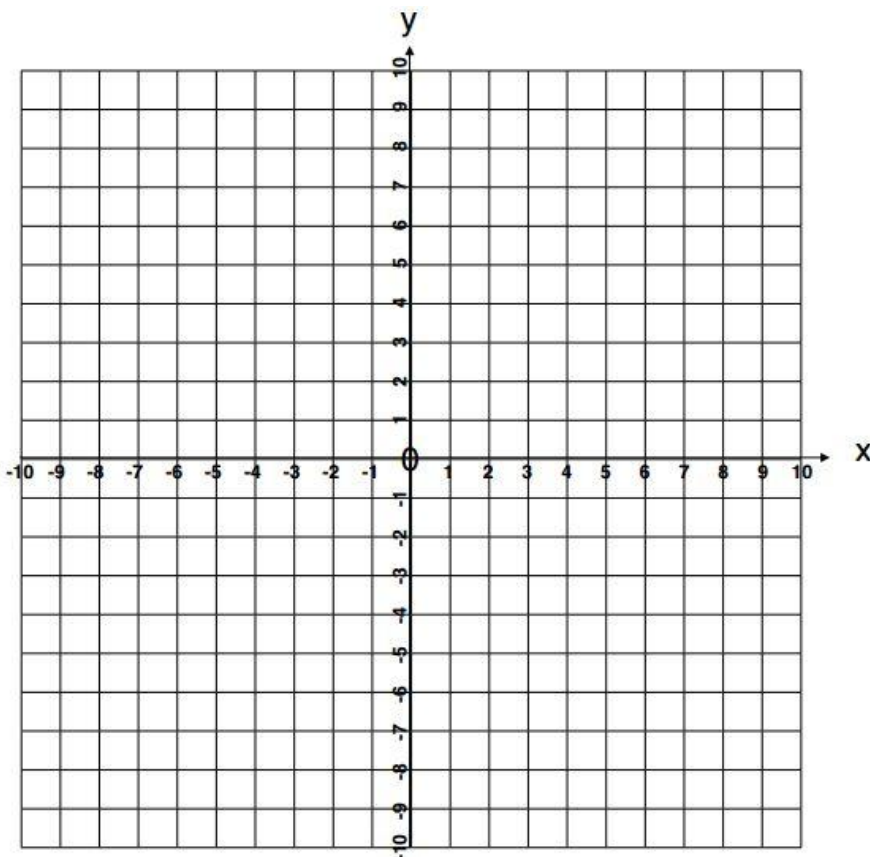

---

The shape's new co-ordinates are:

---

---

---

The co-ordinates of the original shape are:

---

---

---

I moved it:

---

---

---

The shape's new co-ordinates are:
