## Weights and weighing

LO: To suggest suitable units and equipment to measure mass.
To round weights to the nearest $10 \mathrm{~g}, 100 \mathrm{~g}, 250 \mathrm{~g}[1 / 4 \mathrm{~kg}]$

## Round these weights to the nearest 10 g

We often ask you to answer questions in numeracy tasks. Today you are going to find the questions that might have these as the answers:

For example:

1. Answer $=1 \mathrm{~kg}$. Question may be: How much does a bag of sugar weigh?

Think carefully, and suggest suitable questions to go with these answers. You will need to think of how heavy the weights are to help you decide on a question.
2. $\quad \mathbf{5} \mathbf{~ k g}$

Question:

## 3. 100 g

Question:
4. $\quad \mathbf{6 3} \mathbf{~ k g}$

Question:

## 5. 30g
