

# Goal!

This is a game for 2 players. Choose 2 football teams.

Choose a multiplication table and, using the colour of your team, write the first 6 answers of the multiplication table at random in every **rectangle** on the field **except** the goal. (try to make sure that each rectangle has a different answer to adjoining rectangles)

Your partner should do the same, but upside down to you so he/she can see their numbers.

Write 'start' in your part of the centre circle.

Roll the dice to see who starts. Place the ball (A round counter of course!) on your 'start' part of the centre circle.

Roll the dice, multiply the number by the times table number, and if the answer is in any rectangle touching the 'start' section **vertically, horizontally, or diagonally forwards or backwards** move the ball to that rectangle and roll again. Keep moving and rolling as long as you are able. When you can no longer move you lose possession and it is your opponent's turn!(If you can move, you have to move!)

If you get the ball to one of the 3 rectangles nearest to your opponents goal you can shoot! 1-3 is a GOOOOOAAAAAALLLLLL!!!!

4-6 is a miss!

The winner is the person who scores first-or you could play a time game-for example, 5 minutes.
