Squares

You are a landscape gardener and you have been asked to put paving slabs all the way around this pool. Each square is the equivalent of 1 square meter and each slab is 1 square meter. When you have paved your pool it should look like this.

So for a pool this size you would need 12 slabs.

How many slabs would you need for this pool?

3m x 3m

How many slabs would you need for this pool?

4m x 4m

How many slabs would you need for a pool that is 10m x 10m?

Can you describe the rule?

What about if you get a customer who has a pool that is 250m x 250m?

What if you have a customer who has a pool that is 5m x 2m?

5m x 2m

How does this change the rule you had created?
Triangles

You are a landscape gardener and you have been asked to put paving slabs all the way around this pool. Each square is the equivalent of 1 square meter and each slab is 1 square meter. When you have paved your pool it should look like this

So for a pool this size you would need 12 slabs.

How many slabs would you need for this pool?

3m x 4m

How many slabs would you need for this pool?

4m x 5m

How many slabs would you need for a pool that is 10m x 11m?
Can you describe the rule?
What about if you get a customer who has a pool that is 250m x 251m?
What if you have a customer who has a pool that is 5m x 5m?

How does this change the rule you had created?
Circles

You are a landscape gardener and you have been asked to put paving slabs all the way around this pool. Each square is the equivalent of 1 square meter and each slab is 1 square meter. When you have paved your pool it should look like this.
