# Changing State

Today you observed how water changes state. Complete the flow diagram to show the changes from ice through liquid to gas and back again and the causes of the changes.

Complete the following:

\_\_\_\_\_ is the process which takes place when water changes to gas. It is caused by an increase in temperature. \_\_\_\_\_ is the process which takes place when the gas changes back into water.

It is caused by a \_\_\_\_\_ in temperature. Both changes are reversible. Other examples of evaporation are: \_\_\_\_\_ and \_\_\_\_\_.
