

How do seeds get spread around?

Animals

Some plants need animals to spread their seeds around.

Burdock

The head of the burdock is covered in spiky _____. These catch onto the _____ of passing animals. The animals carry them away. The _____ will eventually break up and the seeds will fall out.

Berries

Berries provide a colourful and tasty _____ for many animals. When they eat the fruit they swallow the _____. The seeds travel through the animal's digestive system and come out the other _____!

<i>seeds</i>	<i>coats</i>	<i>meal</i>
<i>end</i>	<i>hooks</i>	<i>head</i>

Burdock
