Sorting quadrilaterals using a Carroll Diagram
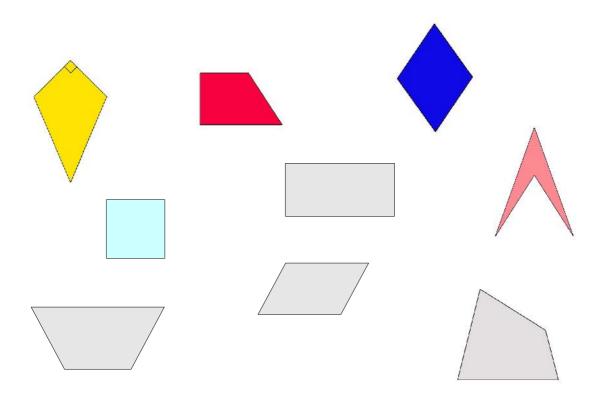

Draw a Carroll diagram.

The rows should be labelled:

"At least one right angle" and "no right angles".

The columns should be labelled:

"At least one line of symmetry" and "no lines of symmetry".

Cut out each of these shapes. Label each shape with its correct name, and place it in the correct place on your Carroll Diagram.

Finished? Think of another way you could sort the quadrilaterals using a Carroll diagram.
