

# Soils - investigation

What is the purpose of the investigation?

Why is it helpful for soil to have air in it?

How are we going to compare the amount of air in two different soils, peat and sand?

How can we make sure that the test is fair?

	<b>Weight</b>	<b>Volume of water at the start.</b>	<b>Volume of water that soaked in.</b>	<b>Volume of water that didn't soak in.</b>	<b>Volume of air in the soil.</b>
<b>Clay</b>					
<b>Loam</b>					
<b>Peat</b>					
<b>Sand</b>					

Draw a graph of the results below.

What have you learnt from this experiment?
